

PANAMA RED - THE LEGEND

HISTORIA DE PANAMA RED

Panama Red es un Strain o Tipo de Cannabis muy especial. Tiene características muy particulares; y los conocedores de Cannabis consideran PANAMA RED, como la mejor marijuana del mundo. A diferencia de otras especies de Cannabis, no da sueño, ni hambre y no lo deja a uno medio tonto... Es más bien un Cannabis ejecutivo que deja funcionar bien relajado y trabajar en el día sin stress, ni sueño y da claridad de mente para crear. Es realmente algo que hay que experimentar para entender.

“Panama Red was a real legend in the 1960s and 1970s, when masses of hippies considered it the best weed. It was and is one of the most psychedelic experiences cannabis could offer.”

Así mismo lo dice toda la literatura, su high es más bien energético que da ánimo, quita la depresión soltando mucha serotonina y dopamina. Da risa y tiene a la gente contenta.

Durante la estadía de los Estados Unidos en Panamá la Fuerza Aérea tenía varias bases en el Archipiélago de Las Perlas en la Bahía de Panamá. Estas especies de Cannabis y Hemp, las plantaron y usaron el gobierno de los EU para fabricar sogas y textiles para hacer los paracaídas de la Segunda Guerra Mundial.

Estos hechos son poco conocidos por el mundo.

El Hemp fue en su momento la industria más grande del mundo para producir las velas de los barcos, ropa, aceites lubricantes, toldas de campaña y un sin fin de productos más.

El clima de Panamá, su suelo y las semillas encontraron una combinación perfecta. Esta combinación produjo como resultado el famoso Cannabis PANAMA RED.

Un Sativa de clase mundial muy psicodélico con efectos psicoactivos muy particulares y diferente a las otras especies de Cannabis.

En los años 70 durante la Guerra de Vietnam, los GI cultivaban y vendían Panama Red a las fuerzas desplegadas en Indochina. Pronto, el comercio de Panama Red llegó a Estados Unidos donde se cotizó como la mejor Marijuana del Mundo.

Panama Red - The legend
Join the Adventure

Coiba Island

Ya para los años 80 con la administración Reagan y la guerra contra las drogas empezaron a fumigar y destruir las plantaciones de Panama Red. Cada vez fue más difícil conseguirlo y sólo unos isleños la cultivaron durante los años 90.

Con la instalación de radares y satélites y una campaña mucho mas fuerte y sofisticada contra el narcotráfico las plantaciones de Panama Red desaparecieron por completo.

Se consideró una especie extinta y desaparecida. Panama Red pasó a ser una leyenda.

Sin embargo, la realidad era otra. Unos cuantos SURFERS que conocían las características especiales de esta especie la siguieron manteniendo y reproduciéndola. Estos Surfers del grupo original de los 70's conocían la gran calidad terapéutica de esta Marijuana considerada el mejor CANNABIS del Mundo. Ellos conocían las plantaciones del ejército y eran amigos de los hijos de los militares de Estados Unidos conocidos como "Zonians".

Estos Surfers viajaban todos los veranos a las islas a comprar y ayudar en la cosecha a los isleños. Varios de estos surfers mantuvieron esta especie ORIGINAL y es así que sobrevive esta LEYENDA en vida.

Así, hoy podemos disfrutar de cremas, aceites y medicinas "PANAMA RED".

“Panama Red was a real legend in the 1960s and 1970s, when masses of hippies considered it **the best weed**. It was and is one of the most psychedelic experiences cannabis could offer. Panama Red gets tall and skinny with long internodes and thick stems. She is truly legendary ...” breeders.”<https://anesiaseeds.com/product/red-panama-landraces/>

“**Panama Red** is known to create a mellow head-high that is very relaxing and slightly psychedelic. Considered by many as the **laughing gas of the 70's**, this Sativa is sure to bring a smile to all who medicate with it.”

Panama Red Marijuana Strain (Review) - Medical Jane
<https://www.medicaljane.com/review/panama-red-mellow-sativa-throwback/>

“Panama Red is best described as an old-school cannabis classic. Originating from Panama, this pure sativa rose to stardom in the late 1960’s thanks to its typical sativa effects: speedy and intense, bordering on psychedelic. As cannabis cultivation matured, Panama Red, which has a lengthy flowering time of at least 11 weeks, was left behind for faster growing strains and increased profits. However, those who fondly recall days of its prominence love its smooth medicating experience and loftily contemplate its revival. If you can get your hands on this sentimental throwback, do not hesitate to groove down memory lane and enjoy the ride. - <https://www.leafly.com/sativa/panama-red/reviews/141790>

PANAMA RED IS A UNIQUE AND SPECIAL STRAIN - VERY DIFFERENT FROM OTHER CANNABIS PLANTS -Day Weed - Relaxing - Mild Bus - Let People work - get things done - - No Sleepiness - No Heavy Stony Bus - No Munchies -

Leafy Review - "where to begin? my father told me growing up in the 60's PR was the best grass you could get. flash forward to today and i came across it at a shop, and had to try what my father called the best. as a 10 year smoker of modern strains, Ill didn't expect the high that came. "

"Ill say this is what weed is about, your cartoony like high. Ill say this, my understanding of the 1960's has drastically changed today".

The screenshot displays the National Cancer Institute (NCI) website. At the top, the NCI logo and name are visible, along with a language selector for 'Español'. A navigation bar includes links for '1-800-4-CANCER', 'Live Chat', 'Publications', and 'Dictionary'. Below this, a dark navigation menu contains 'ABOUT CANCER', 'CANCER TYPES', 'RESEARCH', 'GRANTS & TRAINING', 'NEWS & EVENTS', and 'ABOUT NCI', with a search bar on the right. The main content area shows a breadcrumb trail: 'Home > About Cancer > Cancer Treatment > Complementary & Alternative Medicine (CAM) > CAM for Patients'. A sidebar on the left is titled 'CANCER TREATMENT' and lists categories like 'Types of Cancer Treatment', 'Side Effects', 'Clinical Trials Information', and 'A to Z List of Cancer Drugs'. The main heading is 'Cannabis and Cannabinoids (PDQ®)-Patient Version', with a link to the 'Health Professional Version'. Below the heading is the section 'Questions and Answers About Cannabis', starting with '1. What is Cannabis?'. The text explains that Cannabis, also known as marijuana, is a plant from Central Asia that produces resin containing cannabinoids, some of which are psychoactive. It notes that Cannabis is a controlled substance in the United States and classified as a Schedule I agent. A 'SECTIONS' sidebar on the right lists 'Overview', 'Questions and Answers About Cannabis', 'Current Clinical Trials', 'About This PDQ Summary', and 'General CAM'.

“Cannabinoids may cause antitumor effects by various mechanisms, including induction of cell death, inhibition of cell growth, and inhibition of tumor angiogenesis invasion and metastasis.[9-12] Two reviews summarize the molecular mechanisms of action of cannabinoids as antitumor agents.[13,14]

Cannabinoids appear to kill tumor cells but do not affect their nontransformed counterparts and may even protect them from cell death.”

ESTE ES EL MECANISMO: EL CANNABIS HACE QUE LA CELULA ANORMAL DE CANCER INCREMENTE SU NIVEL DE CERAMIDE Y MUERA

“When THC connects to the CB1 or CB2 cannabinoid receptor site on the cancer cell, it causes an increase in ceramide synthesis which drives cell death. A normal healthy cell does not produce ceramide in the presence of THC, thus is not affected by the cannabinoid.

The cancer cell dies, not because of cytotoxic chemicals, but because of a tiny little shift in the mitochondria. Within most cells there is a cell nucleus, numerous mitochondria (hundreds to thousands), and various other organelles in the cytoplasm. The purpose of the mitochondria is to produce energy (ATP) for cell use. As ceramide starts to accumulate, turning up the Sphingolipid Rheostat, it increases the mitochondrial membrane pore permeability to cytochrome c, a critical protein in energy synthesis. Cytochrome c is pushed out of the mitochondria, killing the source of energy for the cell.”
